## Town of Markham Development Services Committee

### Rogers Wireless Installation

6325 Elgin Mills Road East

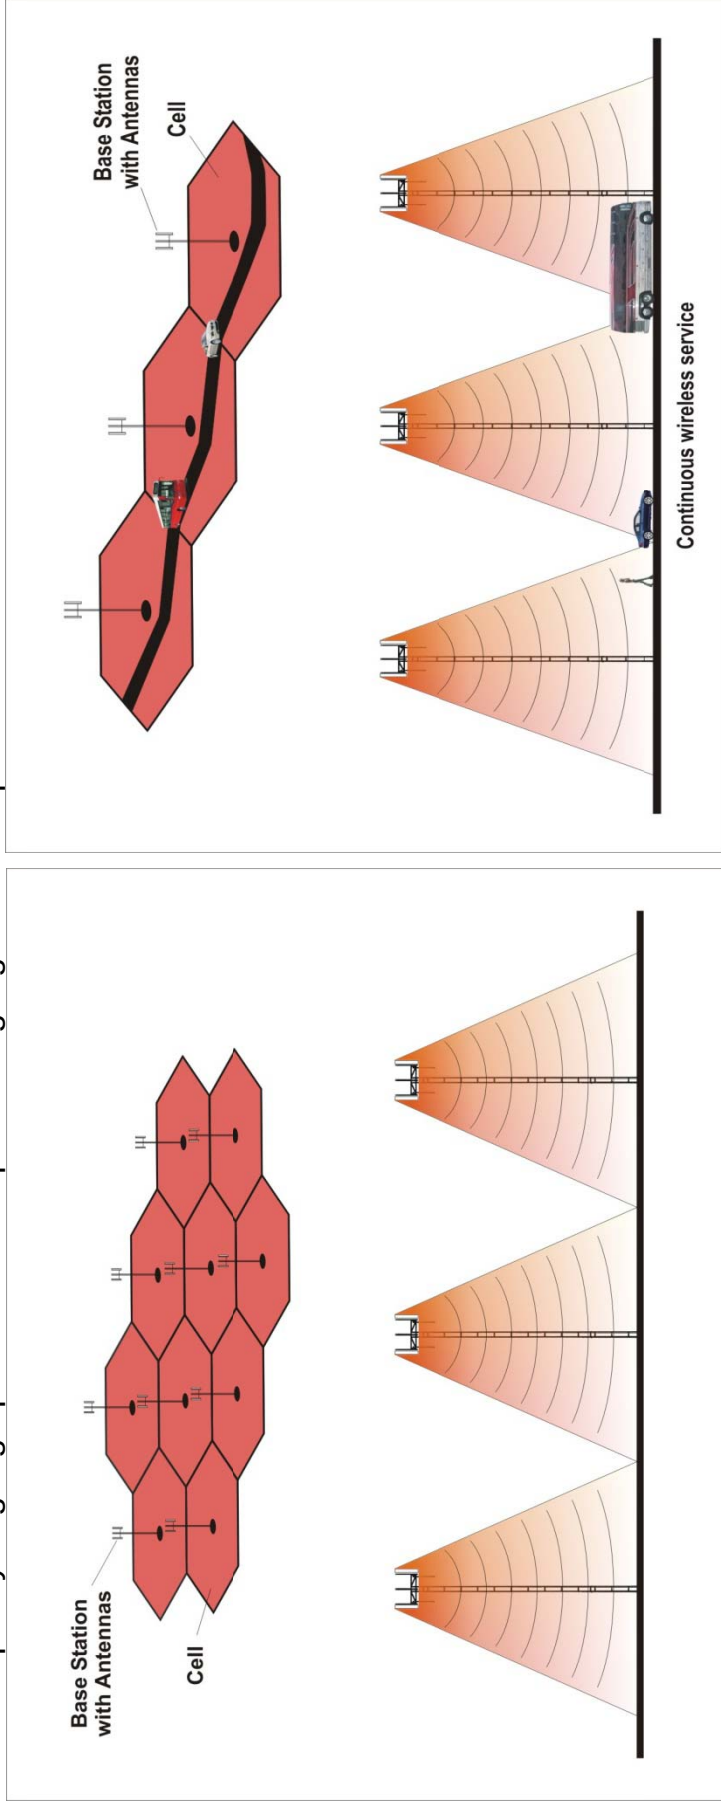

# Wireless Network Coverage

Each wireless provider needs to create a network allowing for transmitting and receiving of radio signals which permits the functioning of wireless devices for uses such as telephone calls, e-mail transmission and web browsing.

Wireless technology has become the preferred way we reach out for emergency services, conduct business and interact with friends and family.

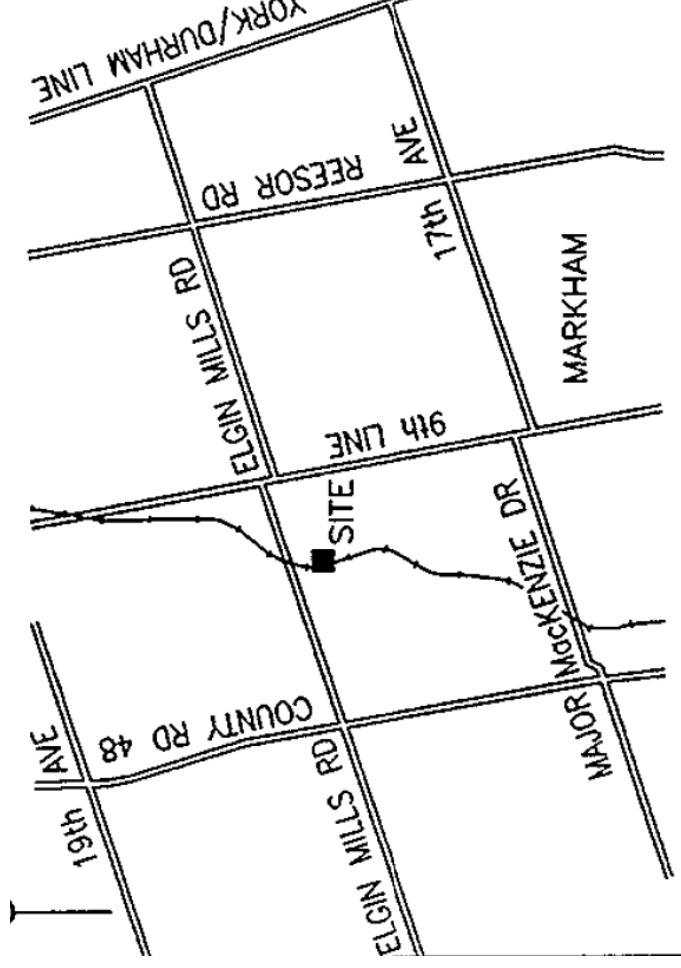

Wireless installations as the one proposed are necessary in order to provide much needed wireless coverage and capacity to geographical areas experiencing high levels of public demand.

## Proposed Roger Site

The location which Rogers Proposed for a wireless communication installation in the area of Hwy 48 & Elgin Mills Road. On a site municipally known as 6325 Elgin Mills Road East. This location is on a vacant parcel of land just south of Elgin Mills Road between the MetroLinx Railway and 9<sup>th</sup> Line

The proposed installation is located approximately 227 metres south of Elgin Mills Road along the east side of the MetroLinx rail line, and about 680 metres west of 9<sup>th</sup> Line.
